

**METHOD AND SYSTEM FOR FACILITATION OF WIRELESS E-COMMERCE
TRANSACTIONS**

5

Abstract of the Disclosure

A method for facilitating a wireless transaction includes communicating a transaction request from a wireless communication device to a transaction apparatus and communicating a spoken authentication code from the wireless communication device to the transaction apparatus. After the spoken authentication code is authenticated, a transaction code is received by the wireless communication device. After receiving the transaction code, the transaction code is displayed on and optically scanned from a visual display of the wireless communication device.
